

Please amend the application as follows:

In the Claims

*Please cancel Claims 22, 31, 41 and 50 without prejudice.*

*Please amend Claims 21, 23, 32, 34, 35, 38, 40, 42, 51, 53, 54, 57, 59, 71, 80 and 107.*

*Amendments to the claims are indicated in the attached "Marked Up Version of Amendments" (pages i - v).*

*Sub  
JL*

*I-1*

---

21. (Fourth Amended) A portable communications device comprising:

- a housing;
- a central processing unit mounted within the housing;
- a wireless transceiver within the housing and coupled to the central processing unit for transmitting and receiving audio;
- a wireless receiver within the housing and coupled to the central processing unit for receiving image data;
- an active matrix liquid crystal display within a display module attached to the housing, the display having an active matrix circuit;
- a light source that is optically coupled to the display, where light from the light source is directed onto the display;
- a display driver circuit within the housing and coupled to the central processing unit and the display, the display driver circuit forming images on the display for viewing by a user;
- a lens within the display module that optically couples an image displayed on the display to an eye of a user for viewing by the user; and
- a battery carried by the housing for powering the central processing unit, the transceiver, the receiver, the display, the light source, and the display driver circuit.

---

cancel*

---

23. (Thrice Amended) The device of Claim 21 wherein the display module rotates relative to the housing.

I-3 32. (Amended) The device of Claim 21 wherein the light source comprises red, green and blue light sources.

I-4 34. (Amended) The device of Claim 21 wherein the display has an array of transistors that is formed with a silicon-on-insulator (SOI) structure.

I-5 35. (Twice Amended) The device of Claim 21 wherein the display module comprises a reflector positioned around the light source.

I-6 38. (Twice Amended) The device of Claim 21 further comprising a flexible ribbon cable connecting the housing and the display module.

I-7 40. (Fourth Amended) A portable wireless telephone comprising:

a housing;

a central processing unit mounted within the housing;

a wireless receiver within the housing and coupled to the central processing unit for receiving audio and image data;

an active matrix liquid crystal display within a display module attached to the housing, the display having an active matrix circuit;

a light source that is optically coupled to the display such that light from the light source is directed onto the display;

a display driver circuit within the housing and coupled to the central processing unit and the display, the display driver circuit forming images on the display for viewing by a user;

a lens within the display module that optically couples an image displayed on the display to an eye of a user for viewing by the user; and

a battery within the housing for powering the central processing unit, the receiver, the display and the driver circuit.

I-8 42. (Thrice Amended) The telephone of Claim 40 wherein the display module rotates relative to the housing.

I-9 51. (Twice Amended) The telephone of Claim 40 wherein the light source comprises red, green and blue light sources.

I-10 53. (Twice Amended) The telephone of Claim 40 wherein the display has an array of transistors that is formed with a silicon-on-insulator (SOI) structure.

I-11 54. (Twice Amended) The telephone of Claim 40 wherein the display module comprises a reflector positioned around the light source.

I-12 57. (Thrice Amended) The telephone of Claim 40 further comprising a flexible ribbon cable connecting the housing and the display module.

59. (Fourth Amended) A method of operating a portable communications device comprising:  
powering a central processing unit, a wireless receiver, a wireless transceiver,  
disposed within a housing and an active matrix liquid crystal display within a display  
module attached to the housing by a battery in the housing;  
operating display control circuitry in the housing to display an image, the display  
control circuitry being connected to a display driver circuit; and  
viewing through a lens within the display module an optically coupled image of  
the displayed image.

I-13 71. (Thrice Amended) A portable wireless telephone comprising:  
a housing;  
a central processing unit mounted within the housing;  
a wireless receiver within the housing and coupled to the central processing unit  
that receives audio and image data;

an active matrix liquid crystal display coupled to the central processing unit and mounted within a display module, the display having an active matrix circuit;

a display driver circuit within the housing and coupled to the central processing unit and the display, the display driver circuit forming images on the display for viewing by a user;

*I-13*  
Concl'd

a lens mounted within the display module that optically couples an image displayed on the display to an eye of a user for viewing by the user;

a light source mounted within the display module having red, green and blue elements and that directs red, green and blue light onto the display; and

a battery within the housing for powering the central processing unit, the receiver, the display, and the display driver circuit.

---

*I-14* 80. (Twice Amended) The telephone of Claim 71 wherein the display has an array of transistors that is formed with a silicon-on-insulator (SOI) structure.

---

107. (Amended) A portable communications device comprising:

a housing;

a central processing unit mounted within the housing;

*I-15*  
Cont

a wireless transceiver within the housing and coupled to the central processing unit for transmitting and receiving audio;

a wireless receiver within the housing and coupled to the central processing unit for receiving image data;

an active matrix liquid crystal display within a display module attached to the housing and coupled to the central processing unit, the display having an active matrix circuit including an array of transistor circuits and an array of pixel electrodes such that the active matrix circuit is bonded to an optically transmissive substrate with an adhesive layer;

a light source within the display module that is optically coupled to the display where light from the light source is directed onto the display;
